The University Checklist

NDIS provider organisation should be supported to establish a flexible and mutually beneficial billing model for students providing services to NDIS participants.

In order for students to gain experience with NDIS participant care a recommendation from our project is that students' placement should be over a longer period of time.

Checklist

- ☐ Design a program of study to include one extended placement (either block or staggered) for students to be placed with an NDIS provider.

- ☐ Build relationships with NDIS provider organisations to design resources that reflect the student placement expectations and requirements with the provider's business.

- ☐ Support the NDIS providers to establish a flexible and mutually beneficial billing model for students providing services to NDIS participants.

- ☐ Support the NDIS provider with information they can share with the NDIS participants, and their supporters to smooth the introduction of students into the appointments that are part of an NDIS plan.

- ☐ Resource the placement educator to successfully manage the student placements.

A useful resource for billing models and about the business of student placements can be found at:
